

LSAT Logical Reasoning — Batch 1 (Questions 1–10)

1. A city implemented a bike-sharing program to reduce traffic congestion. After its introduction, congestion levels remained unchanged. Therefore, the program failed to reduce traffic congestion. Which of the following, if true, most weakens the argument? A. Many residents prefer driving due to convenience. B. The city simultaneously reduced public transportation routes. C. Bike-sharing programs are popular in other cities. D. Traffic congestion varies by season. E. The program required significant public investment.
2. A company claims that its new hiring algorithm selects more qualified candidates because employees hired using it perform better on average than those hired previously. Which of the following is a necessary assumption? A. Job performance is an accurate measure of candidate qualification. B. The algorithm evaluates more criteria than previous methods. C. The company hires more candidates now than before. D. The algorithm is less biased than human recruiters. E. Candidates prefer algorithm-based selection.
3. A nutritionist argues that people who consume more organic foods are healthier. Therefore, consuming organic food leads to better health. The argument is flawed because it: A. assumes that organic foods contain more nutrients B. confuses correlation with causation C. ignores the cost of organic food D. assumes that all people consume similar diets E. fails to define “healthier”
4. If all effective leaders communicate clearly, and some managers do not communicate clearly, then some managers are not effective leaders. The reasoning above is: A. invalid due to affirming the consequent B. valid due to contraposition C. invalid due to denying the antecedent D. valid because it applies transitive reasoning E. invalid because it relies on probability
5. A researcher finds that regions with higher internet access have higher literacy rates. Therefore, increasing internet access will improve literacy. Which of the following most strengthens the argument? A. Literacy programs are often delivered online in those regions. B. Some regions with low internet access have high literacy. C. Internet access is increasing globally. D. Literacy rates are difficult to measure. E. Governments invest heavily in infrastructure.
6. All policies that improve efficiency reduce waste. Some waste-reducing policies increase costs. Therefore, some efficiency-improving policies increase costs. The argument is flawed because it: A. assumes all cost increases are undesirable B. confuses sufficient and necessary conditions C. overlooks alternative explanations D. commits a quantifier shift E. assumes causation from correlation
7. A museum claims that extending its hours increased attendance because attendance rose after the change. However, a major tourist campaign also began at the same time. Which of the following best resolves the issue? A. Whether the campaign targeted museum visitors B. Whether attendance had been declining previously C. Whether other museums saw similar increases D. Whether extended hours increased operating costs E. Whether tourists prefer museums
8. All successful startups adapt quickly to market changes. Some companies that fail to adapt go out of business. Therefore, some companies that go out of business were not successful startups. Which of the following must be true? A. All unsuccessful startups fail to adapt B. Adaptation is necessary for success C. All companies go out of business eventually D. Some startups succeed without adapting E. Market changes determine success
9. A policy maker argues that stricter laws reduce crime because regions with strict laws report lower crime rates. Which of the following most weakens the argument? A. Crime reporting varies across regions B. Strict laws are expensive to enforce C. Some regions have cultural differences D. Crime definitions differ E. Enforcement levels differ significantly
10. If a student studies consistently, they will perform well. The student did not perform well. Therefore, the student did not study consistently. The reasoning is: A. valid via modus tollens B. invalid due to affirming the consequent C. invalid due to denying the antecedent D. valid via

analogy E. invalid due to circular reasoning

LSAT Logical Reasoning — Batch 2 (Questions 11–20)

11. (Strengthen) A city introduced a congestion charge for entering its central district. Traffic volumes initially declined but returned to previous levels within a year. City officials now claim that the charge nonetheless reduces congestion in the long run. Which of the following, if true, most strengthens the officials' claim? A. Drivers who can afford the charge are less sensitive to price increases. B. Public transit ridership increased immediately after the charge was introduced. C. Road capacity in the central district was reduced during the year after the charge was introduced. D. Over time, the number of trips into the central district per capita has declined relative to similar cities without a congestion charge. E. The congestion charge generates revenue used to maintain road infrastructure.
12. (Necessary Assumption) A startup asserts that its new recommendation system improves user satisfaction because average session time increased after deployment. Which of the following is a necessary assumption of the argument? A. Increased session time reflects increased user satisfaction rather than confusion or difficulty. B. The recommendation system uses more sophisticated algorithms than prior systems. C. Users prefer longer sessions to shorter ones. D. Competing platforms did not change their recommendation systems during the same period. E. The startup measured session time accurately.
13. (Flaw) A commentator argues that because a country's life expectancy increased after a new health policy was enacted, the policy caused the increase. The argument is most vulnerable to criticism on the grounds that it: A. ignores the possibility of reverse causation B. assumes that the policy affected all regions equally C. fails to consider that other factors may have contributed to the increase D. relies on data from a limited time period E. presumes that life expectancy is the only relevant health metric
14. (Parallel Reasoning) All artifacts that are authentic have verifiable provenance. Some items in the exhibit lack verifiable provenance. Therefore, some items in the exhibit are not authentic. Which of the following arguments is most similar in its reasoning? A. All efficient engines consume less fuel; some engines consume less fuel; therefore, some engines are efficient. B. All skilled musicians practice regularly; some performers do not practice regularly; therefore, some performers are not skilled musicians. C. All durable materials resist corrosion; some materials resist corrosion; therefore, some materials are durable. D. All reliable sensors are calibrated; some sensors are calibrated; therefore, some sensors are reliable. E. All experienced drivers obey traffic laws; some drivers obey traffic laws; therefore, some drivers are experienced.
15. (Weaken) A school district claims that a new math curriculum improved test scores because scores increased after the curriculum was adopted. Which of the following, if true, most weakens the claim? A. The new curriculum requires more homework than the old one. B. Teachers received additional training at the same time the curriculum was introduced. C. Students reported that the curriculum is more engaging. D. The district increased funding for schools after the curriculum was adopted. E. The tests were made slightly easier in the year following adoption.
16. (Sufficient Assumption) A report concludes that a company's profits will increase if it reduces operating costs while maintaining revenue. Which of the following, if assumed, allows the conclusion to be properly drawn? A. The company's revenue will not decrease after cost reductions. B. Any reduction in operating costs necessarily increases profits if revenue is unchanged. C. Profit is defined as revenue minus operating costs. D. The company has no fixed costs. E. Revenue growth is independent of cost reduction strategies.
17. (Resolve/Explain) A fitness program claims that participants who follow its regimen burn more calories than those who do not. However, data show that average daily calorie expenditure among participants is the same as that of nonparticipants. Which of the following, if true, best resolves the discrepancy? A. Participants compensate for exercise by being less active during the rest of the day. B. The program includes dietary recommendations. C. Participants enjoy the program more than nonparticipants enjoy their routines. D. The program is more popular among younger individuals. E. Calorie expenditure varies widely among individuals.

18. (Inference / Must Be True) All policies that reduce emissions require initial investment. Some policies that require initial investment are unpopular. Which of the following must be true? A. All unpopular policies reduce emissions. B. Some emission-reducing policies are unpopular. C. No unpopular policies reduce emissions. D. Some popular policies require initial investment. E. All policies that require initial investment reduce emissions.

19. (Principle) Principle: If a rule is applied inconsistently, it undermines trust in the institution that enforces it. Which of the following situations most clearly illustrates the principle? A. A company enforces its policies strictly for all employees. B. A school applies disciplinary rules differently depending on the student involved. C. A government changes its policies in response to public opinion. D. A manager explains the reasons for a rule to employees. E. A court delays decisions due to case backlog.

20. (Disagreement) Scientist A: Increasing atmospheric carbon dioxide will accelerate plant growth significantly. Scientist B: While carbon dioxide can enhance growth, other limiting factors such as nutrient availability prevent significant acceleration. The two scientists disagree over whether: A. carbon dioxide levels are increasing B. plant growth depends on multiple factors C. carbon dioxide alone can significantly accelerate plant growth D. nutrient availability affects plant growth E. atmospheric conditions influence ecosystems

LSAT Logical Reasoning — Batch 3 (Questions 21–30)

21. (Weaken) A company claims that introducing flexible work hours increased employee productivity because output rose after the policy change. Which of the following, if true, most weakens the claim? A. Employees reported higher job satisfaction after the change. B. The company also introduced performance-based incentives at the same time. C. Flexible work hours are popular in many industries. D. Some employees prefer fixed schedules. E. Productivity is difficult to measure accurately.

22. (Necessary Assumption) A researcher concludes that a new medication is effective because patients who took it recovered faster than those who did not. Which of the following is a necessary assumption? A. The patients who took the medication were not healthier initially than those who did not. B. The medication is affordable for most patients. C. Recovery speed is the only measure of effectiveness. D. Patients followed dosage instructions precisely. E. The medication has no side effects.

23. (Flaw) A city planner argues that since cities with more parks have lower crime rates, building more parks will reduce crime. The argument is flawed because it: A. assumes that parks directly cause lower crime without ruling out other factors B. ignores differences in park size C. relies on incomplete data D. assumes all parks are equally effective E. fails to define crime rates

24. (Parallel Reasoning) All reliable software systems undergo extensive testing. Some applications have not undergone extensive testing. Therefore, some applications are not reliable. Which of the following most closely parallels the reasoning? A. All strong materials resist pressure; some materials resist pressure; therefore, some materials are strong. B. All skilled athletes train regularly; some individuals do not train regularly; therefore, some individuals are not skilled athletes. C. All healthy diets include vegetables; some diets include vegetables; therefore, some diets are healthy. D. All effective policies reduce costs; some policies reduce costs; therefore, some policies are effective. E. All trained professionals are certified; some professionals are certified; therefore, some professionals are trained.

25. (Strengthen) A study finds that students who attend review sessions score higher on exams than those who do not. Therefore, attending review sessions improves exam performance. Which of the following, if true, most strengthens the argument? A. Students who attend review sessions are more motivated overall. B. The review sessions cover material not included in lectures. C. Students who attend sessions and those who do not had similar performance before the sessions. D. Attendance at review sessions is voluntary. E. Exams are graded consistently.

26. (Sufficient Assumption) A policy analyst argues that if a city reduces pollution, public health will improve. Which of the following, if assumed, makes the conclusion logically valid? A. All improvements in public health are due to reduced pollution. B. Reducing pollution is sufficient to improve public health. C. Public health depends on multiple environmental factors. D. Pollution levels are currently high. E. Health improvements are difficult to measure.

27. (Resolve/Explain) A company reports that customer satisfaction has increased, yet the number of repeat customers has declined. Which of the following, if true, best resolves the discrepancy? A. Customers are satisfied but are switching to competitors offering lower prices. B. The company has expanded into new markets. C. Satisfaction surveys are optional. D. Repeat customers tend to spend less. E. The company introduced new products.

28. (Inference / Must Be True) All innovative companies invest heavily in research. Some companies that invest heavily in research are not profitable. Which of the following must be true? A. Some innovative companies are not profitable. B. All profitable companies are innovative. C. No innovative companies are profitable. D. Some profitable companies invest heavily in research. E. All companies that invest heavily in research are innovative.

29. (Principle) Principle: If an action leads to predictable harm and there is a reasonable alternative, the action should be avoided. Which of the following most clearly illustrates the principle? A. A

driver chooses a faster route despite known risks. B. A company uses a cheaper material that occasionally fails. C. A manufacturer replaces a harmful chemical with a safer alternative. D. A student studies longer to improve performance. E. A business expands into new markets.

30. (Disagreement) Economist A: Lowering interest rates will always stimulate economic growth. Economist B: Lowering interest rates does not always stimulate growth because other factors can limit investment. The two economists disagree over whether: A. interest rates influence economic growth B. economic growth depends on multiple variables C. lowering interest rates is sufficient to stimulate growth D. investment affects economic growth E. economic policies should change

LSAT Logical Reasoning — Batch 4 (Questions 31–40)

31. (Weaken) A company claims that its new marketing campaign increased sales because sales rose after the campaign launched. Which of the following, if true, most weakens the claim? A. The campaign was expensive to produce. B. A competitor went out of business at the same time. C. Customers responded positively to the campaign. D. Sales vary seasonally. E. The company expanded distribution channels earlier.

32. (Necessary Assumption) A scientist concludes that a new fertilizer improves crop yield because fields using it produced more crops. Which of the following is a necessary assumption? A. The fertilizer was applied correctly in all fields. B. Fields using the fertilizer were not inherently more fertile. C. Crop yield is affected by weather conditions. D. Farmers prefer higher yields. E. The fertilizer is widely available.

33. (Flaw) A tech analyst argues that because companies with higher R&D spending have higher profits, increasing R&D spending will increase profits. The argument is flawed because it: A. assumes causation from correlation B. ignores industry differences C. relies on outdated data D. assumes all companies can afford R&D; E. fails to define profit

34. (Parallel Reasoning) All valid contracts require mutual consent. Some agreements lack mutual consent. Therefore, some agreements are not valid contracts. Which argument parallels this reasoning? A. All trained pilots pass exams; some individuals pass exams; therefore, some individuals are trained pilots. B. All healthy individuals exercise; some people exercise; therefore, some people are healthy. C. All certified professionals meet standards; some individuals do not meet standards; therefore, some individuals are not certified professionals. D. All effective tools are durable; some tools are durable; therefore, some tools are effective. E. All successful businesses make profit; some businesses make profit; therefore, some businesses are successful.

35. (Strengthen) A report claims that remote work increases productivity because employees report getting more done. Which of the following, if true, most strengthens the argument? A. Employees prefer working from home. B. Productivity metrics also increased after remote work adoption. C. Some employees struggle with remote work. D. Remote work reduces commuting time. E. Managers support flexible work arrangements.

36. (Sufficient Assumption) A consultant argues that if a company reduces costs while maintaining revenue, profits will increase. Which assumption makes this conclusion logically valid? A. Profit equals revenue minus costs. B. Costs are currently high. C. Revenue fluctuates over time. D. The company has no debt. E. Cost reduction is difficult.

37. (Resolve/Explain) A survey shows that customer satisfaction has increased, yet complaints have also increased. Which of the following best resolves the discrepancy? A. More customers are using the service than before. B. Complaints are easier to submit now. C. Customers expect higher standards. D. Satisfaction surveys are voluntary. E. The company expanded globally.

38. (Inference / Must Be True) All ethical policies are transparent. Some transparent policies are controversial. Which must be true? A. Some ethical policies are controversial. B. All controversial policies are ethical. C. No ethical policies are controversial. D. Some controversial policies are not ethical. E. All transparent policies are ethical.

39. (Principle) Principle: If a decision is made based on incomplete information, it is likely to be flawed. Which example illustrates this principle? A. A manager delays a decision until more data is available. B. A doctor prescribes treatment without reviewing test results. C. A student studies thoroughly before an exam. D. A company gathers market research. E. A judge considers all evidence.

40. (Disagreement) Analyst A: Increasing advertising always increases sales. Analyst B: Advertising does not always increase sales because product quality also matters. They disagree over whether: A. advertising affects sales B. product quality matters C. advertising alone is

sufficient to increase sales D. sales depend on multiple factors E. marketing strategies vary

LSAT Reading Comprehension — Questions 41–60

PASSAGE 1

Recent debates in urban economics have focused on whether zoning regulations primarily serve public welfare or entrenched private interests. Proponents of zoning argue that such regulations prevent negative externalities, such as congestion and pollution, by organizing land use efficiently. They maintain that without zoning, incompatible land uses—such as industrial facilities adjacent to residential areas—would diminish quality of life. Critics, however, contend that zoning laws often function less as safeguards and more as barriers to entry, particularly in housing markets. By restricting supply through density limits and lengthy approval processes, zoning can artificially inflate housing prices. This, critics argue, disproportionately benefits incumbent property owners while excluding lower-income populations. Moreover, they suggest that the supposed externalities zoning addresses could instead be mitigated through targeted regulations rather than broad restrictions. A third perspective emphasizes that the impact of zoning is context-dependent. In rapidly growing cities, zoning may indeed exacerbate affordability crises, whereas in less dynamic regions it may stabilize development patterns. This view holds that zoning cannot be evaluated in isolation but must be considered alongside broader economic and demographic trends. Ultimately, the disagreement centers not merely on the effects of zoning but on the appropriate balance between market freedom and regulatory oversight. While both sides acknowledge the need to address externalities, they diverge sharply on whether zoning achieves this goal efficiently or at excessive social cost.

41. The primary purpose of the passage is to: A. defend zoning regulations against criticism B. compare competing interpretations of zoning regulations C. argue that zoning is ineffective in all contexts D. propose a new model of urban planning E. demonstrate that zoning always benefits property owners
42. The author's attitude toward the third perspective is best described as: A. dismissive B. critical C. cautiously approving D. indifferent E. skeptical
43. According to the passage, critics of zoning believe that zoning: A. fails to address externalities B. reduces housing supply and raises prices C. benefits renters more than owners D. is necessary for urban development E. eliminates inequality
44. The passage suggests that proponents of zoning would most likely agree that: A. zoning should be eliminated entirely B. market forces alone can regulate land use C. zoning prevents incompatible land uses D. zoning increases inequality E. housing prices should remain low
45. The function of the third paragraph is to: A. refute the critics' argument B. introduce an alternative perspective C. provide historical context D. summarize the debate E. advocate a specific policy
46. Which of the following is most strongly supported by the passage? A. Zoning regulations always benefit society B. Zoning effects vary depending on context C. Critics misunderstand zoning laws D. Externalities cannot be addressed without zoning E. Housing markets are unaffected by regulation
47. The author implies that the disagreement over zoning stems primarily from: A. differing definitions of externalities B. conflicting values regarding regulation and markets C. lack of empirical evidence D. political motivations E. historical misunderstandings
48. Which of the following would most weaken the critics' argument? A. Evidence that zoning increases housing supply B. Data showing zoning reduces pollution C. Studies showing no effect on prices D. Evidence that zoning benefits renters E. Data showing zoning is rarely enforced

PASSAGE 2

In recent years, scholars have debated the extent to which artificial intelligence (AI) systems can be said to exhibit genuine understanding. Some argue that AI systems merely simulate understanding through pattern recognition, lacking the intentionality that characterizes human cognition. According to this view, even highly advanced systems operate through statistical associations rather than true comprehension. Others contend that the distinction between simulation and understanding may be overstated. They argue that if an AI system consistently produces contextually appropriate responses, it may be functionally indistinguishable from one that genuinely understands. From this perspective, understanding is defined operationally rather than metaphysically. A third group suggests that the debate itself is misguided. They propose that understanding is not a binary property but exists along a spectrum. On this view, AI systems may possess a limited form of understanding that differs in degree rather than kind from human cognition. Despite these differing perspectives, there is consensus that AI systems have practical utility regardless of their philosophical status. The debate, therefore, has implications less for the deployment of AI than for how society conceptualizes intelligence and agency.

49. The main point of the passage is to: A. argue that AI lacks understanding B. compare different views on AI understanding C. prove that AI systems are intelligent D. reject all philosophical debates about AI E. demonstrate the limits of AI

50. The author's tone is best described as: A. critical B. neutral and analytical C. dismissive D. enthusiastic E. skeptical

51. The second paragraph presents: A. a criticism of AI systems B. an alternative definition of understanding C. a historical overview D. empirical evidence E. a rejection of the debate

52. The third perspective suggests that: A. AI cannot understand anything B. understanding is gradual rather than absolute C. humans lack understanding D. AI surpasses human cognition E. understanding is irrelevant

53. Which of the following is most strongly supported? A. AI systems will replace humans B. Understanding is purely metaphysical C. The debate has limited practical implications D. AI lacks utility E. AI is fully understood

54. The passage implies that: A. operational definitions are universally accepted B. philosophical debates influence deployment decisions C. AI systems may have varying degrees of understanding D. all scholars agree on AI limitations E. understanding cannot be defined

COMPARATIVE PASSAGES

Passage A

Economic regulation is often justified as a means of correcting market failures. Proponents argue that without intervention, monopolies and externalities can lead to inefficient outcomes. Regulation, therefore, serves as a necessary corrective mechanism to ensure fairness and efficiency.

Passage B

Critics of economic regulation contend that intervention frequently introduces inefficiencies of its own. They argue that regulatory bodies are prone to capture by the industries they oversee, resulting in policies that benefit incumbents rather than the public.

55. The primary difference between Passage A and Passage B is that: A. Passage A supports regulation, while Passage B critiques it B. Passage A discusses inefficiency, Passage B ignores it C. Passage A focuses on history, Passage B on theory D. Passage A rejects regulation, Passage B supports it E. Both passages support regulation

56. Both passages agree that: A. regulation always improves markets B. markets function perfectly without intervention C. regulation affects economic outcomes D. monopolies do not exist E. externalities are irrelevant

57. Passage B suggests that regulation: A. is always beneficial B. can be influenced by industry interests C. eliminates inefficiency D. reduces competition E. is unnecessary

58. Passage A would most likely respond to Passage B by arguing that: A. regulation is unnecessary B. regulatory capture never occurs C. benefits of regulation outweigh its risks D. markets are always efficient E. inefficiency cannot be corrected

59. The passages differ primarily in: A. their definition of markets B. their evaluation of regulatory effectiveness C. their focus on externalities D. their historical examples E. their writing style

60. Which of the following would both authors likely agree with? A. Regulation is always harmful B. Markets require no oversight C. Regulation plays a role in economic systems D. Externalities do not matter E. Efficiency is irrelevant
